Trust & Safety, Platform Operations & International Relations

officiall.turan@gmail.com · [linkedin.com/in/turan-t](https://www.linkedin.com/in/turan-t) · [portfolio site](#) · Baku, Azerbaijan

International Relations student and trust-and-safety practitioner. For the past two and a half years I've handled platform operations at Axlebolt, building moderation systems and governance documentation across the Turkish, English, and Brazilian Portuguese communities. My work sits where day-to-day enforcement meets policy: writing the references moderators rely on, designing detection that flags risk before it spreads, and bringing structural problems to management with proposals attached. Alongside this I study digital governance and US–China competition, with two research articles in progress.

EXPERIENCE

Technical Support Specialist, Axlebolt

September 2024 – Present · 1 year 9 months

- Handled Turkish and English support tickets across technical issues, account problems, gameplay disputes, and player reports via Intercom; also processed Russian-language cheating and abuse reports.
- Wrote weekly and monthly moderation assessments for the Brazil regional manager, tracking violation rates, repeat offenders, and operational gaps.
- Built a Notion tracking system with automated violation-rate formulas for daily moderation logging.
- Set ticket distribution and coverage rules for the Turkish support queue when new staff joined.
- Submitted structural recommendations for Brazil operations as part of the monthly reports: moderator hiring, blacklist rollout, and coordination protocols.

Senior Community Moderator (Turkish & English), Axlebolt

October 2023 – Present · 2 years 8 months

- Longest-serving active moderator on the Turkish and English Discord channels; handled escalations other moderators passed up.
- Took on the Brazilian Portuguese channel without speaking the language, using AI-assisted translation and pattern recognition. Over a tracked period spanning January to May 2026: 7,526 messages monitored Jan–Feb, 6,282 in March, 11,856 in April, and 8,900 in May. Across the period I processed 123+ violations, including 74 in May alone, with 12 bans in April. Worked solo, without native language coverage, through peak hours.
- Caught new violation types early: modified-APK solicitation, automated gambling spam, and coordinated account-trading networks. Identified ban evasion cases by recognising writing style and message patterns across returning accounts.
- Documented structural gaps in the Brazil operation and submitted formal monthly assessment reports with prioritised recommendations: native moderator hire, repeat offender record system, and blacklist deployment.
- Advised staff leadership on team performance and escalation calls; reviewed candidates for Turkish-region moderator hiring, several of whom were brought on.
- Conducted structured conduct and governance reviews of moderation operations, documenting enforcement gaps, protocol breaches, and integrity issues across multiple cases with timestamped evidence, and producing case files for senior management.

Volunteer Community Operations, Standoff 2 Turkey

October 2023 – Present · Personal initiative, alongside Axlebolt role

- Co-led community operations with the Turkey management team on a volunteer basis: grew the community past 5,000 members and founded a FACEIT server (1,500+) and an Azerbaijan server (1,200+).
- Set up moderation across 5+ servers and ran tournament and giveaway operations; made the case for regional players that led to better pricing in the Azerbaijan market.

SELECTED PROJECTS

Blacklist 1.0: Master Moderation Reference

Apr 2026 – Present · Axlebolt

A five-language reference of 439 entries across 10 violation categories: hate speech, slurs, scam patterns, real-world threats, doxxing, and filter-bypass techniques. Usable directly by moderators and importable by systems (YAML). Languages: Turkish, English, Brazilian Portuguese, Romanian, Polish.

Blacklist 2.0: Behavioral Risk Framework

Oct 2024 – Present · Axlebolt

A proactive detection system on four signal layers: pattern combinations, time-based escalation, coordinated account behavior, and ticket-flood response. Every flagged case goes to human review, with no automatic bans. Shipped with a YAML dataset and full governance documentation.

Regional Governance & Strategy Analysis: MSA Proposal

Apr 2026 – Present · Axlebolt

An eight-page internal report on Brazil and Turkey operations, submitted to senior management. Identified three structural gaps and proposed a dedicated analyst role, supported by regulatory analysis, ban-wave data, and a benchmark against Sea/Garena operations.

EDUCATION

BA International Relations, Adnan Menderes University

September 2024 – In progress · Focus: digital governance, US–China competition

Elite Gymnasium, Secondary Education

September 2013 – June 2024

RESEARCH IN PROGRESS

- A2/AD strategy and deterrence in the South China Sea, using a neorealist framework.
- AI governance as geopolitical norm-setting: the TikTok case and Western standard-setting.

SKILLS & LANGUAGES

Focus areas: Trust & Safety · Community Moderation · Escalation Management · SOP & Process Documentation · Behavioral Risk Analysis · Operational Planning · Multilingual Communication

Tools: Notion · Trello · Intercom · Discord · Confluence · Google Sheets · Google Docs · Flourish · Zapier / Make · AI translation & analysis tools

Languages: Azerbaijani (native) · Turkish (C2) · English (B2) · Russian (A2)
